RECTICEL
The passion for comfort

The yin &
yang
of mattresses

| A state of **equilibrium** |

The new anti-decubitus mattress that covers a wider patient weight range...

mini-MAX

Foam for Care presents the **mini-MAX** mattress where size doesn't matter.

mini-MAX

Take the weight **off your mind!**

The **mini-MAX** is a non turning mattress giving the same levels of support and comfort for almost all adult patients regardless of their size.

In all probability 99% of your patients will be in the weight range from 40kg to 220kg.

So, what do you do when you get a patient at either end of this scale? Should you put them on the same mattress?

Lighter weight patients can feel uncomfortable lying on standard mattresses. On the other hand heavier people may find them too soft and not providing the right support.

But with the **mini-MAX**, you don't need to worry any more about changing the mattress according to the weight of your patient!

mini-MAX has been designed to provide the same level of care, comfort and support for the 40kg patient as for someone weighing up to 220kg.

With the **mini-MAX**, Foam for Care created a mattress getting the balance just right for people of all sizes.

One size fits all

A State of Equilibrium

HOW DO YOU GET FROM 40 TO 220 IN 0 SECONDS?

With the **mini-MAX**, it's easy. You don't need to take any time at all. There's no reason to change mattresses if the last patient weighed as little as 40kg and the next one 220kg. The specially developed **mini-MAX** has taken care of all these possibilities **mini-MAX** can save valuable time in busy healthcare environments as it can be used for virtually everyone.

How we got the balance right.

mini-MAX has been created by blending features giving high strength and durability as well as subtle variances in softness and comfort.

This unique performance is achieved by a mix of specially selected high quality PU-foam grades combined with a new gel sac technology.

Each foam layer has been selected to perform in specific ways throughout the mattress, combining with the gel sacs to give the extra support where and when it's needed.
